The **TROJAN CAD-MASTER PACK** comprises of a Graphics program plus a Light Pen and this instruction booklet. The pack is intended for use by micro users of all ages and any level of expertise. It can be used to produce any type of picture from a full colour art display to a black and white technical drawing. The 'Pin Point' function in the program allows pixel accuracy and the various pen thicknesses can be used to dramatic effect. Please experiment with all the functions which, when combined with all 16 colours, seven brightnesses and the three pen types, give more choices than mentioned in this booklet.

A FEW HINTS ...
Keep the tip of your light pen clean. When using the pen, always point it directly at and square to the screen, holding it as you would a pen or pencil. Do not apply undue pressure on the tip of the pen — a light touch is all that is required.

LOADING THE SOFTWARE
The software supplied in this pack is on cassette tape but can be acquired on disk by filling in the coupon and sending it with your remittance to the address given.
1. Insert the cassette into the recorder.
2. Type in LOAD and press RETURN. Wait for READY to appear on the screen.
3. Type in RUN and press RETURN. Main Menu will now appear on the screen.

WHEN THE PROGRAM HAS BEEN LOADED

Plug the Pen into Joystick port No.1.

THE MAIN MENU
To select an option from the Main Menu you point the tip of the pen at the centre of the box to the RIGHT of the required option.

LINE TYPES
The first column down the left hand side of the menu screen are all 'LINE TYPE' options. When you have selected the type of line that you require the box on the menu will change colour to red and remain red until you select another line type. The LINE TYPE which you select will be used to draw in
